

Our drive is your advantage!

Series MA10

Diaphragm-actuator

- Compact design
- Small diaphragm-actuator
- Easy mounting at foreign valves
- Low hysteresis

Completion of the actuator series

The production of pneumatic actuators is one of our core competences. For years the MA-series has been consequently maintained and adopted to up-to-date standards as well as customer needs.

This is why with the MA actuator a well constructed modular parts system with a control stroke up to 136 mm and control forces up to 125 kN is today available.

Increasing requests from several areas that work with smaller components, made an extension of the series with a smaller MA actuator necessary. A very space-saving diaphragm-actuator in a compact design has been created recently.

With the MA10, that is equipped with a diaphragm diameter of 90 mm, a basic version started, that is variably used as an ATO as well as an ATC and is also reversible.

Technical data

- Dimension: Ø115 x 140 mm
- Shutt off force: 1,5 kN
- Stroke: 20 mm
- The actuator is reversible

Materials

- Standard execution in stainless steel
- Diaphragm EPDM with reinforcement

Options

- Mounting: yoke or pillar
- Actuator available with handwheel
